

# 8 Steel™ in Asko Dishwashers

## Plastic vs. Steel? Steel Wins

Other manufacturers try to save money by making dishwasher components out of plastic. In the environment of continual heating and cooling those plastic pieces are the first thing to break, resulting in service calls.

This is why ASKO produces dishwashers with 8 Steel™ - eight of the most important components are made of high-quality steel rather than plastic: **container, spray pipe, outer base, spray arms, loading racks, feet, strainers, and inner door.**

*Our machines are built to last longer, and they do.*
